Dear Christian,

I hope this message finds you well. We are excited to have the opportunity to propose a comprehensive solution for your GPS tracking needs, including both mobile and web applications. Our goal is to provide you with a user-friendly and efficient tracking system that meets your specific requirements.

Project Overview:

You have expressed the need for a GPS tracking system, comprising both a mobile and web application. Here's an outline of our proposed solution:

Mobile Application:

Platform: We recommend React Native to ensure compatibility with both iOS and Android devices.

Features: Our mobile app will include essential features such as real-time GPS tracking, geo-fencing capabilities (supporting up to 5 specific locations), health signals from the tracker, and a focus on optimizing battery life to ensure prolonged usage.

Real-Time Alerts: Users will receive instant notifications for events such as entering or leaving a geo-fenced area or low battery status.

History Playback: Users can review historical tracking data for specific timeframes, enabling them to analyze past routes and locations.

User-Friendly Interface: The mobile app will be designed with a user-friendly interface, making it easy for non-technical users to operate and monitor the tracking system.

Regular Updates: We commit to providing regular updates and improvements to ensure the app remains up-to-date and secure.

Web Application:

Platform: We recommend ReactJS for web development because it makes building websites faster, easier, and more efficient.

Real-Time Dashboard: A web-based dashboard will provide an overview of all tracking devices, their current locations, and status. Users can customize the dashboard to display the data most relevant to their needs.

Admin Dashboard: Admin dashboard to manage user settings and all GPS tracking system.

Customization: We will ensure that the web application can be customized to meet your specific branding and user interface requirements.

Hardware Information:

Gerber Files: These files contain detailed instructions for manufacturing the printed circuit board (PCB), ensuring precise component placement and soldering.

Pick & Place Files: These files guide automated machines in accurately picking and placing electronic components onto the PCB during assembly.

BOM (Bill of Materials): A list specifying all components and materials required for building the hardware, ensuring proper procurement and assembly.

All Production Files: Comprehensive documentation and files necessary for mass production of the hardware, ensuring consistency and quality.

Schematics and PCB Files: Detailed diagrams and layouts depicting the electrical connections and physical design of the hardware, crucial for troubleshooting and modifications.

Firmware: The software that runs directly on the hardware, enabling it to perform specific functions and interact with other components effectively.

Compliance with European Union Standards: It is important to note that our device and system will be designed and developed in full compliance with European Union standards to ensure safety, reliability, and adherence to applicable regulations.

Flow Of Application:

First, User will create an account, if user is new then he will sign up otherwise he will go for login.
After account creation, Next screen is to create and register a document.
The next screen is the Items list screen where all the items are displayed in drop down.
Now Next screen is for sender details.
Next screen is for location of sender.
Now we connect applications from tracker through manually.
Now we create geofencing.
Tracker setup.
Next option is for setting manual notification for location on the package.
then at the last, user will get confirmation notification after receiving package.

Confidentiality:

We understand the sensitive nature of GPS tracking data and commit to maintaining the utmost confidentiality. All data will be encrypted and secured to prevent unauthorized access.

Revisions:

We will allow for two rounds of revisions after the initial deployment to ensure the system aligns with your expectations. Additional revisions will be considered under the scope of a maintenance agreement.

We look forward to the opportunity to collaborate on this exciting project and provide you with a robust GPS tracking solution. If you have any questions or require further clarification, please do not hesitate to contact us.
